

add_On

design Satyendra Pakhalé

“In architecture radiators are present as technical components and, as such, are usually neglected from the aesthetic point of view, even though they are among the most important products in the architectural system. So, the first idea that came to my mind was to create a radiator with a very wide surface in order to spread more heat. Furthermore, I wanted to create a radiator that would have the personality of an object and that would fit into the furnishings as an eloquent but discreet presence. I created a system based on a module developed in two directions thanks to four shaped sides that allow further modules to be added on (“add-On”) thus creating an infinite radiator”.

add_on regular form

The normal add_on model is installed on the wall like a traditional radiator and it has a well defined rectangular shape.

VERSIONS AVAILABLE

- WATER

COLOURS

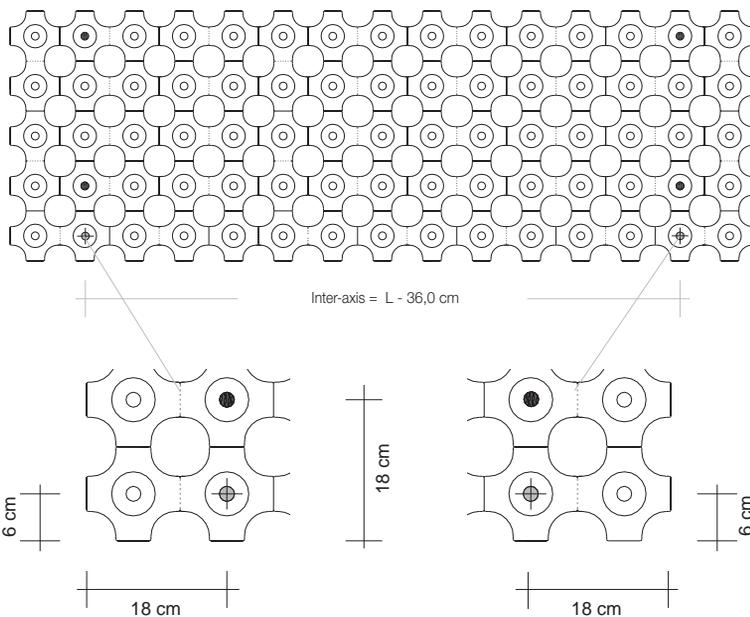

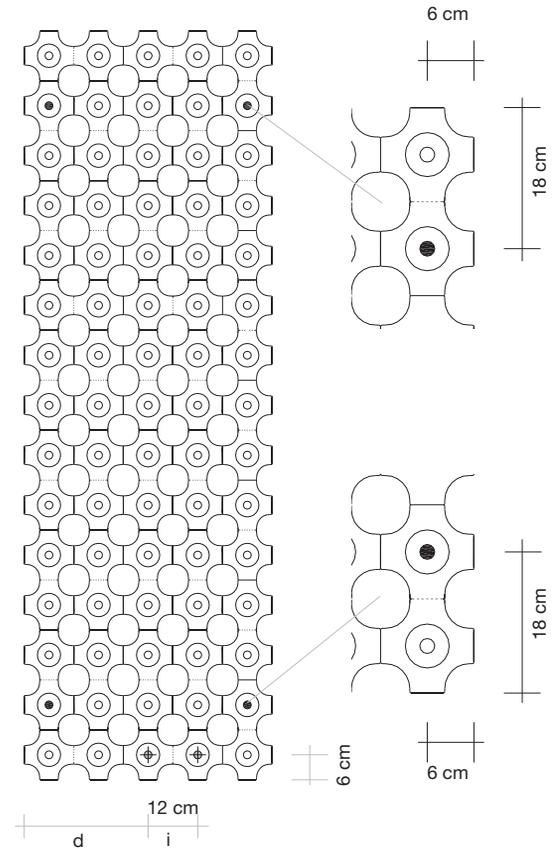

The add_on model in all its versions is supplied exclusively in RAL 9010 or Glossy Black (code NELC) without any variation in price.

PACKING

The cardboard packing box is included in the price of sale of the products, and it contains the complete wall fixing kit.

CONNECTORS

The add_on model is connected to the heating system with the remote connection Valve and Lockshield (GVR) supplied as an ACCESSORY. To fully understand how to arrange for installation see the GVR connection diagram in page15.

- i= Inter-axis between the connectors for system connection (see GVR connection diagram)
- d = the distance between the left side of the radiator and the centre of the first connector varies according to the width of the radiator, specifically:
 - L. 36 and 48 cm d = 18 cm
 - L. 60 and 72 cm d = 30 cm
 - L. 84 and 96 cm d = 42 cm
- Position of wall fixing support
- ⊕ Position of connector for connecting to the system (see GVR connection diagram)

The drawing above represents the front view of the radiator, the position of the connectors for connection to the water system and the supports for wall fixing are clearly indicated.

Watt = Kcal/h ÷ 0,860
Kcal/h = Watt x 0,860

The add_on inter wall model is a special model installed inside a wall like a partition or something similar to a window between two areas. To mount this model you need to install a counter-frame (included in the price) when the brickwork is not finished (still not coated with plaster). After having arranged for installation and completed the wall finish you can install the model and properly connect it to the heating system. You can mount and remount the radiator at any time by simply disassembling the MDF frame (unpainted).

Inter wall mounting

1. install the add_on counter-frame (a) in the un-plastered wall, carefully following the installation instructions
2. Arrange for connection to the heating system (d)
3. Mount the add_on with fixing frame (b) in the counter-frame (a).
4. Connect the add-on to the connection arrangement of the heating system (d)
5. Mount the MDF cover and fastening frame(c) of inter wall add_on
6. Paint the MDF frame (c) or plaster with the required wall finish.

CONNECTOR DIAGRAMS

The add_on inter wall model has the same choice of connectors as the normal add_on model. For inter-axes and connection diagrams refer to the charts in page 14.
